

What Are Eye Floaters?

Eye floaters are also known as vitreous floaters or eye spots. They are tiny specks, circles, or threadlike clouds that appear in your field of vision.

To people who have looked under a microscope at microscopic cells, eye floaters may seem similar in appearance. Eye floaters can usually be seen when looking at plain, light colored backgrounds. Although eye floaters are usually harmless, there are treatments for them.

Please contact our office to learn more about eye floaters.
